1. Introduction: What is Allme and What Does It Do?

Welcome to **Allme**! Allme is a smart, friendly assistant widget that floats on your computer desktop. It is shaped like a smooth circular orb and sits gently on top of your windows so you can always see and use it.

Instead of searching through taskbars or remembering complicated computer commands, Allme gives you instant access to your daily desktop tools with simple mouse clicks.

What can Allme do for you in plain language?

- **Switch Open Apps Instantly:** Click the orb to hop between open programs without searching the taskbar.
- **Switch Web Browser Tabs:** Step through your web browser tabs forward and backward directly from the orb.
- **Take Screenshots & Record Screen Video:** Capture snapshots or record video clips of your monitor with a single click.
- **Glow & Dance to Your Music:** Watch the orb light up with colorful waves and pulsing rings whenever you play songs or videos.
- **Monitor Your PC's Health:** See your processor (CPU), graphics card (GPU), memory (RAM), internet speed, and typing speed in real time.

2. Understanding the Allme Desktop Orb (Visual Layout)

The Allme widget is designed as a circular orb divided into 3 distinct clickable areas, surrounded by an outer glowing ring:

Orb Area	Where It Is	What You See Inside It
Center Core	The small circle in the very middle of the orb.	Shows the logo of your currently active web browser or program icon. Turns into a solid red square while recording video.
Left Sector	The outer left half-ring surrounding the	Separated by subtle dashed lines.

Orb Area	Where It Is	What You See Inside It
	center.	Highlights when your mouse hovers over the left side.
Right Sector	The outer right half-ring surrounding the center.	Separated by subtle dashed lines. Highlights when your mouse hovers over the right side.
Ambient Glow Halo	The soft radial light shining around the orb.	Pulses with breathing effects, moves with sound volume, or changes color according to your PC health metrics.

3. How to Operate Allme (Mouse Clicks & Keyboard Tricks)

Basic Mouse Controls

Operating Allme is as simple as clicking different parts of the orb with your mouse buttons:

Mouse Button	Where You Click	What Happens (Action)
Left Click	Center Core	Quick Switch: Instantly jumps back to the last program you were working in.
Left Click	Left Sector	Previous App: Cycles backward to the previous open window on your desktop.
Left Click	Right Sector	Next App: Cycles forward to the next open window on your desktop.
Right Click	Center Core	Switch Browser Tab: Brings your web browser to the front and switches tabs.
Right Click	Left Sector	Previous Tab: Moves to the browser tab on the left.
Right Click	Right Sector	Next Tab: Moves to the browser tab on the right.
Middle Click	Center Core	Record Video: Starts or stops recording your screen. The orb border turns red while recording.

Mouse Button	Where You Click	What Happens (Action)
Middle Click	Left or Right Sector	Take Screenshot: Takes a snapshot picture of your screen. The orb flashes white to confirm.

Keyboard & Mouse Combination Tricks

You can hold down a key on your keyboard while left-clicking the orb to perform special actions:

- **Shift + Left Click:** Locks or unlocks the orb's position so you don't accidentally move it.
- **Ctrl + Left Click:** Turns on **Fly Mode**, making the orb follow your mouse pointer across the desktop.
- **Alt + Left Click:** Safely closes and exits Allme completely.

Moving & Positioning Allme

To move Allme anywhere on your screen, simply click and hold the left mouse button on the orb and drag it to your desired spot. Allme will automatically remember where you left it, even when you restart your computer!

4. Complete Layman's Guide to Menu Options & Settings

Right-clicking the Allme System Tray icon (located near your Windows clock) or right-clicking the menu area opens the **Settings Menu**. Here is a plain-English breakdown of every single menu item and setting:

Part A: General Controls & Display Modes

Menu Setting Name	What It Means in Layman's Language
Always on Top	When checked, Allme stays visible above all other open programs so it never gets hidden under heavy windows.
Lock Position	Freezes Allme in its current spot on your desktop so you cannot accidentally drag or nudge it while clicking.
Clickthrough (Pass Mouse)	Makes Allme "transparent" to your mouse. Clicks will pass right through Allme to whatever window or desktop item is behind it.
 Clickthrough Mode	Submenu offering 4 mouse pass-through choices: • 1. Pass All: Passes all clicks through Allme to background apps. • 2. Pass Left Click Only: Only left clicks pass through. • 3. Pass Right Click Only: Only right clicks pass through.

Menu Setting Name	What It Means in Layman's Language
	• 4. Pass Middle Click Only: Only middle clicks pass through.
 Fly Mode (Follow Cursor)	Makes Allme follow your mouse pointer around the screen like a floating helper orb. (Middle-clicking while in Fly Mode instantly switches active windows).
 Futuristic Dashboard	Opens a large, high-tech window displaying detailed graphs of your computer's speed, graphics card, RAM memory, and internet traffic.
Start with Windows	When turned on, Allme starts up automatically every time you turn on or log into your Windows computer.

Part B: Visual Animations & Breathing Effects

Menu Setting Name	What It Means in Layman's Language
Enable Ambient Glow	Turns the soft glowing light halo around the outside of Allme on or off.
Enable Breathing Animation	Adds a slow, gentle pulsing rhythm to Allme, making it feel like it is gently breathing.
 Breathing Target	Submenu choosing where the breathing pulse appears: • 1. Both (App & Glow): Both the orb and the outer glow pulse together. • 2. App Only: Only the inner orb pulses in size. • 3. Glow Only: Only the outer glowing light pulses.
Enable Mouse Movement Activity	Makes Allme react when you move your mouse cursor quickly. The glow gets brighter and larger as mouse speed increases.
 Mouse Movement Target	Choose whether fast mouse movement brightens 1. Both, 2. App Only , or 3. Glow Only .

Part C: Colors, Themes & System Color Linking

Menu Setting Name	What It Means in Layman's Language
 Color Hue Target	Selects where your custom color choice is applied: • Both (App & Glow): Colors both the inner orb and outer glow. • App Only: Colors only the inner orb. • Glow Only: Colors only the outer glowing halo.
Link System Accent	Automatically matches Allme's color theme to your Windows system accent color (your personal Windows color theme).

Part D: Music & Audio Spectrum Visualizers

Menu Setting Name	What It Means in Layman's Language
Enable Audio Overlay Visualizations	Turns on live music visualizer effects so Allme dances whenever audio or music plays from your speakers.
 Audio Driver Mode	Submenu choosing how Allme listens to sound: • 1. Both (Volume & Frequency): Reacts to both sound loudness and musical pitches. • 2. Volume Only: Reacts only to how loud the sound is. • 3. Frequency Only: Reacts only to high/low musical notes and beats.
 Audio Visualizations (Profiles)	Select your favorite visual style when music plays: • Pulsing Aura: A classic glowing halo that pulses smoothly with the beat. • Chroma Pulse: A rainbow color show that shifts through colors as music plays. • Equalizer Ring: 24 equalizer frequency bars bouncing around the orb like a stereo system. • Waveform Orbit: A wavy sound wave spinning around the outside edge of Allme. • Frequency Ripple: Shockwave light rings expanding

Menu Setting Name	What It Means in Layman's Language
	outward whenever heavy bass or drum beats hit.
	• Particle Spark: 12 glowing beat dots orbiting and jumping to the rhythm.

Part E: System Health Data Linking (Link Source & Link Sink)

Allme allows you to link your computer's health metrics (Link Source) to visual changes in the widget (Link Sink).

Link Source Options (What computer stat do you want to track?)

- **0. None:** Turns off system stat tracking.
- **1. Normal Human Breathing Sine:** Uses a smooth, relaxed human breathing rhythm.
- **2. CPU Frequency:** Tracks your processor's speed (clock rate).
- **3. CPU Usage:** Tracks how hard your processor is working (0% to 100%).
- **4. HDD Activity:** Tracks hard drive reading/writing activity. Includes *HDD Settings* to choose specific drives or Read/Write modes.
- **5. Memory Usage:** Tracks how much RAM memory your PC is currently using.
- **6. Ethernet & Ping:** Tracks your internet download/upload speeds or ping latency (delay).
- **7. GPU Usage:** Tracks how hard your graphics card is working (great for gaming).
- **8. System Power Usage:** Tracks your power supply status and laptop battery discharge rate.
- **9. Keyboard Typing Speed (WPM):** Tracks how fast you are typing in Words Per Minute.

Link Sink Options (How should Allme visually change to show that stat?)

- **0. None:** No visual change.
- **1. App Size:** Makes the orb get larger when the stat goes up.
- **2. App Color (Red -> Blue Shift):** Shifts orb color from Red to Blue based on the stat level.
- **3. Glow Size:** Makes the outer glow halo grow bigger when the stat goes up.
- **4. Glow Color (Blue -> Red Shift):** Shifts glow halo color from Blue to Red based on workload.
- **5. App Opacity:** Makes the orb more solid or see-through based on the stat.
- **6. Glow Opacity:** Brightens or dims the glow halo based on workload.
- **7–9. Combined Targets:** Simultaneously modulates both App and Glow size, color, or opacity.

Part F: Sizing & Transparency Sliders

At the bottom of the menu, you will find 6 easy-to-use slider bars:

Slider Name	What Moving the Slider Does
App Opacity	Adjusts how solid or see-through the inner orb appears (10% transparent to 100% solid).
Glow Opacity	Adjusts how bright or faint the outer glowing light halo shines.
Glow Size	Makes the glowing light ring around Allme larger or smaller.
Color Hue	A smooth color wheel slider (0° to 360°) allowing you to pick any exact color tint.
Breathing Speed	Adjusts how fast or slow the breathing animation pulses.
App Size	Resizes the overall Allme orb from a compact small dot to a large desktop widget.

5. The Futuristic System Health Dashboard

When you select  **Futuristic Dashboard** from the menu, a full diagnostic window opens. This window is designed like a high-tech control panel that shows live graphs and numbers for your PC:

- **CPU Processor Graphs:** Shows real-time percentage load across every core of your processor.
- **Graphics Card (GPU) Monitor:** Displays graphics workload percentage, video RAM (VRAM) usage, and card temperature.
- **Memory (RAM) Gauge:** Shows how many gigabytes of memory are being used by open programs.
- **Hard Drive & Network Activity:** Displays live disk read/write speeds, internet upload/download speeds, and ping latency in milliseconds (ms).
- **Typing Speed (WPM) Meter:** Shows your real-time typing speed in Words Per Minute as you type on your keyboard.

6. Taking Screenshots & Recording Videos

Taking Screenshots

Middle-clicking the outer sectors of Allme takes a full-screen snapshot picture. The orb will briefly flash bright white to let you know the picture was taken. Screenshots are automatically saved with timestamped filenames in your **Pictures/Allme/Screenshots** folder.

Recording Screen Videos

Middle-clicking the center core of Allme starts a high-definition video recording of your desktop monitor. While recording, the outer border of Allme turns a bright red color and the center core displays a red square indicator. Middle-click the center core again to stop recording. Videos are saved in your **Pictures/Allme/Recordings** folder.

7. Saved File Locations & Troubleshooting Common Issues

Where Files Are Saved on Your PC

Item	Folder Location on Your PC
Screenshots	C:/Users/[YourName]/Pictures/Allme/Screenshots/
Video Recordings	C:/Users/[YourName]/Pictures/Allme/Recordings/
Saved Settings	C:/Users/[YourName]/AppData/Roaming/Allme/config.json
Error & Crash Logs	C:/Users/[YourName]/AppData/Local/Allme/Logs/ allme_crash_report.txt

Troubleshooting & Frequently Asked Questions

Question: What if Allme disappears or goes off the edge of my screen? **Answer:** Simply restart Allme. Upon launching, Allme automatically checks your monitor boundaries. If it sees that it was saved off-screen, it instantly snaps back to the center of your screen.

Question: Why can't I drag Allme with my mouse? **Answer:** Check if *Lock Position* or *Fly Mode* or *Clickthrough* is turned on. Press **Shift + Left Click** on Allme to toggle position lock off.

Question: Why does a second instance of Allme close automatically? **Answer:** Allme includes a Built-in Single Instance Guarantee. Only one Allme orb can run at a time to prevent duplicate system tray icons and audio driver conflicts. Launching Allme again cleanly closes the old instance.
